

Fidelity UK Equity Pensions Fund

DEFINED CONTRIBUTIONS

FUND PROFILE

FUND OBJECTIVE

The UK Equity Pensions Fund aims to achieve long-term capital appreciation. The fund will invest primarily in the shares of companies in the United Kingdom. There is no policy to restrict investment to particular economic sectors.

INVESTMENT APPROACH

The fund is a combination of the portfolios of individual managers from the UK equity team. Each individual manager builds their portfolio using a bottom-up approach, focusing their efforts on stock selection. The fund manager is responsible for overseeing the top level multi-manager fund, reviewing the manager mix and rebalancing the risk profile of the fund as necessary. When combining managers, the fund manager looks at performance expectations and the complementary nature of their investment styles. The aim is to build a fund that can outperform through different market environments – i.e. with greater consistency than a single manager approach.

PORTFOLIO MANAGER

Name: Rita Grewal
Location: London
Appointed to fund: 26.01.09

Rita Grewal joined Fidelity in 1995 as a Research Analyst. She became a Portfolio Manager in 2003, responsible for both Institutional portfolios and multi-manager and asset allocation funds. Rita has over 14 years investment experience, and holds a BA from Bryn Mawr College in the United States.

FIL Limited was established in Bermuda nearly 40 years ago and provides asset management services to investors outside of the Americas. FIL Limited and its respective subsidiaries form the global investment management organisation that is commonly referred to as Fidelity International. Fidelity International and the Pyramid Logo are trademarks of FIL Limited. Fidelity International only gives information on its products and does not provide investment advice based on individual circumstances. The value of investments may go down as well as up and an investor may not get back the original amount invested. Due to the greater possibility of default, an investment in corporate bonds is generally less secure than an investment in government bonds. In certain countries, and for certain types of investments, transaction costs are higher and liquidity is lower than elsewhere. There may also be limited opportunities to find alternative ways of managing cash flows especially where the focus of investment is on small and medium sized firms. For funds specialising in such countries and investment types, transactions, particularly those large in size, are likely to have a greater impact on the costs of running a fund than similar transactions in larger funds. Prospective investors should bear this in mind in selecting funds. The funds referred to in this document invest in or are reinsured into funds managed by non-Fidelity International life insurance companies or fund managers. Funds in the property sector may invest in property and land. These can be difficult to sell and there may be a delay in acting on instructions to sell investments. The value of property is generally a matter of a valuer's opinion rather than fact. The funds shown in this document are available, and intended, for UK investors only. Issued and approved by FIL Life Insurance Limited (FSA registered number 186526) a firm authorised and regulated by the Financial Services Authority. FIL Life Insurance Limited is a member of the Fidelity International group of companies and is registered in England and Wales under the company number 3406905. The registered office of the company is Oakhill House, 130 Tonbridge Road, Hildenborough, Tonbridge, Kent TN11 9DZ, United Kingdom. April 2010. MDC04412.

RISK RATING (Equity funds)

This rating gives an indication of the risk level of Cash (A1-A2), Bond (B1-B3), Equity (E1-E5) and Property (P1-P2) funds only in relation to Fidelity's range of funds within each asset class. A higher number signifies a higher risk fund. They are intended only as a guide and are based on our quarterly rating review process which uses information about a fund manager's investment approach, as well as quantitative measures based on the fund's historic performance and its current holdings.

RISK RATING DESCRIPTION

A fund with potentially more volatile returns than average, as a result of high weights in a single country, sector or potentially more volatile types of stock (e.g. smaller companies).
